

Smart College Complaint and Issue Tracking System

Detailed Algorithm

Step 1

Start the program.

Step 2

Declare arrays for Student ID, Name, Department, Year, Email, and Password. Initialize count = 0.

Step 3

Display the main menu with options: Create, Delete, Display, Search, Update, Exit.

Step 4

Read the user's menu choice.

Create Student

Read all student details, store them at index 'count', increment count, display success message.

Delete Student

Read Student ID, search array, if found shift remaining elements left, decrement count, display success; otherwise display 'Student Not Found'.

Display Students

If count is 0, display 'No Students Found'; otherwise loop through arrays and print every student.

Search Student

Read Student ID, search arrays, if found display details; otherwise display 'Student Not Found'.

Update Student

Read Student ID, search arrays, if found accept new details and overwrite existing values; otherwise display 'Student Not Found'.

Exit

Display 'Thank You' and terminate the program.

End

Stop.
